Something touching the Noble Country of  
JAMAICA,

And how to make this *Ephemeris* serviceable  
to the *West-Indies*.

By JOHN GADBURY, Student in  
Physick and Astrology.

*Multi multa sciunt, sed nulli omnia.*

LONDON,

Printed by J. D. for the Company of  
STATIONERS, 1677.

## To the Observing READER S.

Gentlemen,

**Y**OU may please to remember that in my Almanack for 1675, I mentioned somewhat of the returns of the rest of the Planets into Aries, as well as that of the Sun: And in particular did remark some of Mercuries returns, with some suitable Effects answering unto them which I had carefully observed, too long to be rementioned in this place. From which Hypothesis, I presumed Astrologically to inform the World, That upon the return of Mercury into Aries 1675, there was some more than ordinary advantage promised to attend the English Nation. Nay, I was so fortunate as to instance in the advance of the FISHERY in the narrow Seas. And, behold! (as a happy Omen of an Eternal Friendship between the Court and the City of London, (which I pray God may ever continue) as well as for making good that my Prediction) in Anno 1676, His most excellent Majesty. King Charles the Second, as a Prince studious of the good and enrichment of his Subjects, hath appointed Commissioners of Noblemen, Gentlemen, Merchants and other Citizens, to consider how to advance and improve the FISHERY of the Nation: Which Honourable Worthy and Ingenious Persons, so Commission'd, have chosen to sit and consult twice in the week upon this so great and profitable affair at Stationers Hall.

Non nobis, Domine, non nobis &c. Let the honour of this Prediction be attributed to the God of Truth, who vouchsafes of his goodness to impart what verity we are partakers of, unto us.

From

## The Epistle to the Observing Reader.

From this mean Essay, the sober Artist may find a fit Method for the discovery of many excellent secrets which are lodged in the Stars.

I had intended some more curious Observations on the Weather this Year, but wanted time. For to predict the mutation of the Air justly, requires an expence of more sand than many are aware of, and it is no easie matter to become Weather-wise; although it be to meet Contempt and Scorn for our endeavours herein. The Subject is very copious, and I want room to say even a little upon it. But I hope the World will ere long be made happy with the excellent Labours of the Learned Dr. J. Goad, who (to his due merit be it spoken) hath taken more pains in the Weather than any man that I know of; and had lately the honour to satisfy the Kings Majesty of the Influence of the Stars in Meteorology, not only by Verbal Colloquy, but by delivering into his Princely hands, a Diary of the Weather for some considerable time, which proved exactly true. ——— Let this Nation be ever blessed with such a Prince that delights to study how the Sun, Moon and Stars praise their Maker. So prayeth,

JOHN GADBURY.

Brick-Court, by the  
Deans-Yard,  
Westminster.

Quind. Mart.	Nov. 26	Nov. 26	Nov. 27	Nov. 28

The Law's our Rule of Life, the Judges be  
The Stars of Kings, and by that Rule dispense,  
As they find Reason, and Necessary,  
To all degrees of men their Influence.  
'Tis true. some find them sharp, and others sweet,  
Right Sons and Rebels diversly they greet.

# January hath XXXI Days.

Hot *Mars*, Cold *Saturn*, to begin the Year,  
Direct, ith' *Twins*, and furious *Bull* appear:  
Their progress is by Sun-light over us,  
Not to be seen, they follow *Sol* to close.

This weeps with *Pleades*, that with *Castors* Head,  
Designs *Twin-Cities* of Peace ravished.

# April hath XXX. Dayes.

April's a pleasant moneth, yet angry *Mars*,  
Against brisk *Hermes* stimulateth Jars :  
He, tyrant-like, oppresseth *Venus* too ;  
And she to *Jove*, and *Seilbon*, tells her wo.  
Young Clerks, young Ladies, look to't, *Jove* is weak.  
And loss of place, and vertue, Hearts can break.

May hath XXXI. Days.

Saturn doth leave the Bull, hee'll not appear  
Within his Confiner more, this *Thirty* Year.  
Yet, at his parting, doth *Conjunction* make,  
With *Sol* and *Hermes*, at which both do quake:  
Whence *stormy weather* issues, and debates,  
Of *subtile Fraud*, among *European States*.

# June hath XXX Days.

Chronus ith' Twins, and Mars ith' Lyon Thunders.  
To fill the World with Horror, Fear and Wonders.  
No Earthquake now, I hope: or if there be,  
'Tis Westward, ho! and we in England free.  
But lets not looth our selves; for now and then,  
We shall have tremblings among mighty Men.

*Some Astrological Observations, 1677.*

It is very observable, that in this year there are three very remarkable and unusual Transits of the nimble Planet *Mercury*; and all of them in the watery Tri- plicity. I care not greatly if I point them out to you.

1. The first of them is made in the *Celestial Fishes*, which sign he enters on Jan. 28, and continues herein until April the 5, almost ten weeks in time.

2. The second Mercurial Transit is in the Tropical sign of *Cancer*, from May the 23, unto July the 31, only he will be a little while in *Leo* by Retrogradation, but soon out again.

3. The third and last Mercurial Transit will be in the *Celestial Scorpion*, the Horoscope of this our Vernal Fi-  
 C  
 gure.

gure, from Septemb. 21, to Novemb. 27, a time as long as either of the former.

*Mercury* is a small Planet, but yet is the Author of great designs and contrivances: He can tell how to puzzle Nations and Kingdoms, as well as Persons; and (as he may be posited) can render them as Lunatick and unsteady.

I could tell you when he made the like Transits, and could also observe somewhat from them of worthy consideration too, but hold it not convenient to comment on such usual *Phænomena* without special License.

It is observable likewise, that *Mercury* maketh no less than seven Conjunctions with the *Sun* in this year 1677, which we know to be very unusual; and that the rather, in regard of the places the Conjunctions happen in. And here, good Reader, I could take occasion to descant upon the ♄ of the ☉ and ☾, and ♄ his ☐ to them both, in the Vernal Figure; of ♄ his position in *Domo Septima*, among the *Pleiades*: of ♄ his opposing the *M. Cæli*, cum multis aliis, &c. which this our Vernal Scheme affords. But I transite them all, as well knowing that the best Lutanist in the world can make but jarring and unpleasant Musick, if his Instrument be out of Tune. I shall therefore chuse in the room thereof, to describe the Natures of the several Seasons after the method of my last years Ephemeris, because my Notions hereof came unto the hands but of a few, by reason of an Embargo upon my Book, upon occasion of a difference about the Printing of Almanacks: but this year I hope it will salute the world with greater freedom, and less opposition.

1. Of the Spring Season.

**T**He Spring, the most glorious and delightful Season of the whole year, beginneth always when the ☉ enters ♈, which this year begins at the time mentioned in the foregoing Figure of Heaven. It continueth all that time the

the *Sun* passeth thorough the three first Signs, viz. ♈, ♉, ♊. At the beginning of this Season, the *Sun* maketh Days and Nights equal all over the world; he then leaving the Inhabitants of the Southern Hemisphere, doth begin to refresh and revive with his glorious and cheering Influence all those that inhabit the Northern Hemisphere.

The Rulers of this Quarter are according to Astrologers, ♄, ♀, ♃, and they Physically denote, vigor, delight, and mutability. And accordingly while the *Sun* is in ♈, all Vegetables put forth their leaves and blossoms, and Nature is endued with a Spring-like force. When the *Sun* is in ♉, the Leaves and Flowers of the Fields expand themselves after a delightful manner; and Dame *Vesta* opens her Paradise of Pleasures to all her Children, exercising both their souls and senses. Whence the Poet teaches us,

*Excideret tibi divini muneris Author,  
Presentem monstrat, qualibet Herba Deum.*

This by N. C. in English,

Because out of thy thoughts God should not pass,  
His Image stamped is on every Grass.

All the time the *Sun* continues in ♊, Natures Limners are at work, and out of force of ♄, and delights and pleasantries of ♀ paint to the World a million of pleasant varieties, that Mankind may hereby be taught how to abate his stock of Melancholy, and banish his pensive thoughts, by contemplating those ravishing, but harmless pieces of Natures workmanship, and need not be beholding to the conversation of treacherous company, nor yet to a forced exhilaration afforded from a Tavern, or Musick-house.

The curious Emblems of the Spring, (though they carry a pleasing witchcraft in them), are void of fraud, and know not the art of Trepanning. Natures innocent

Syrens tempt none to the rock of Destruction. *Ulysses* may here sit soberly, and without being bound to his Ships Mast, may delightfully open his ears to these charms.

But now, as if God and Nature never intended that Mankind should be gluttied with the beholding of one Object continually, the glorious and youthful Spring, with all its verdant varieties leaves us; and we must next approach unto

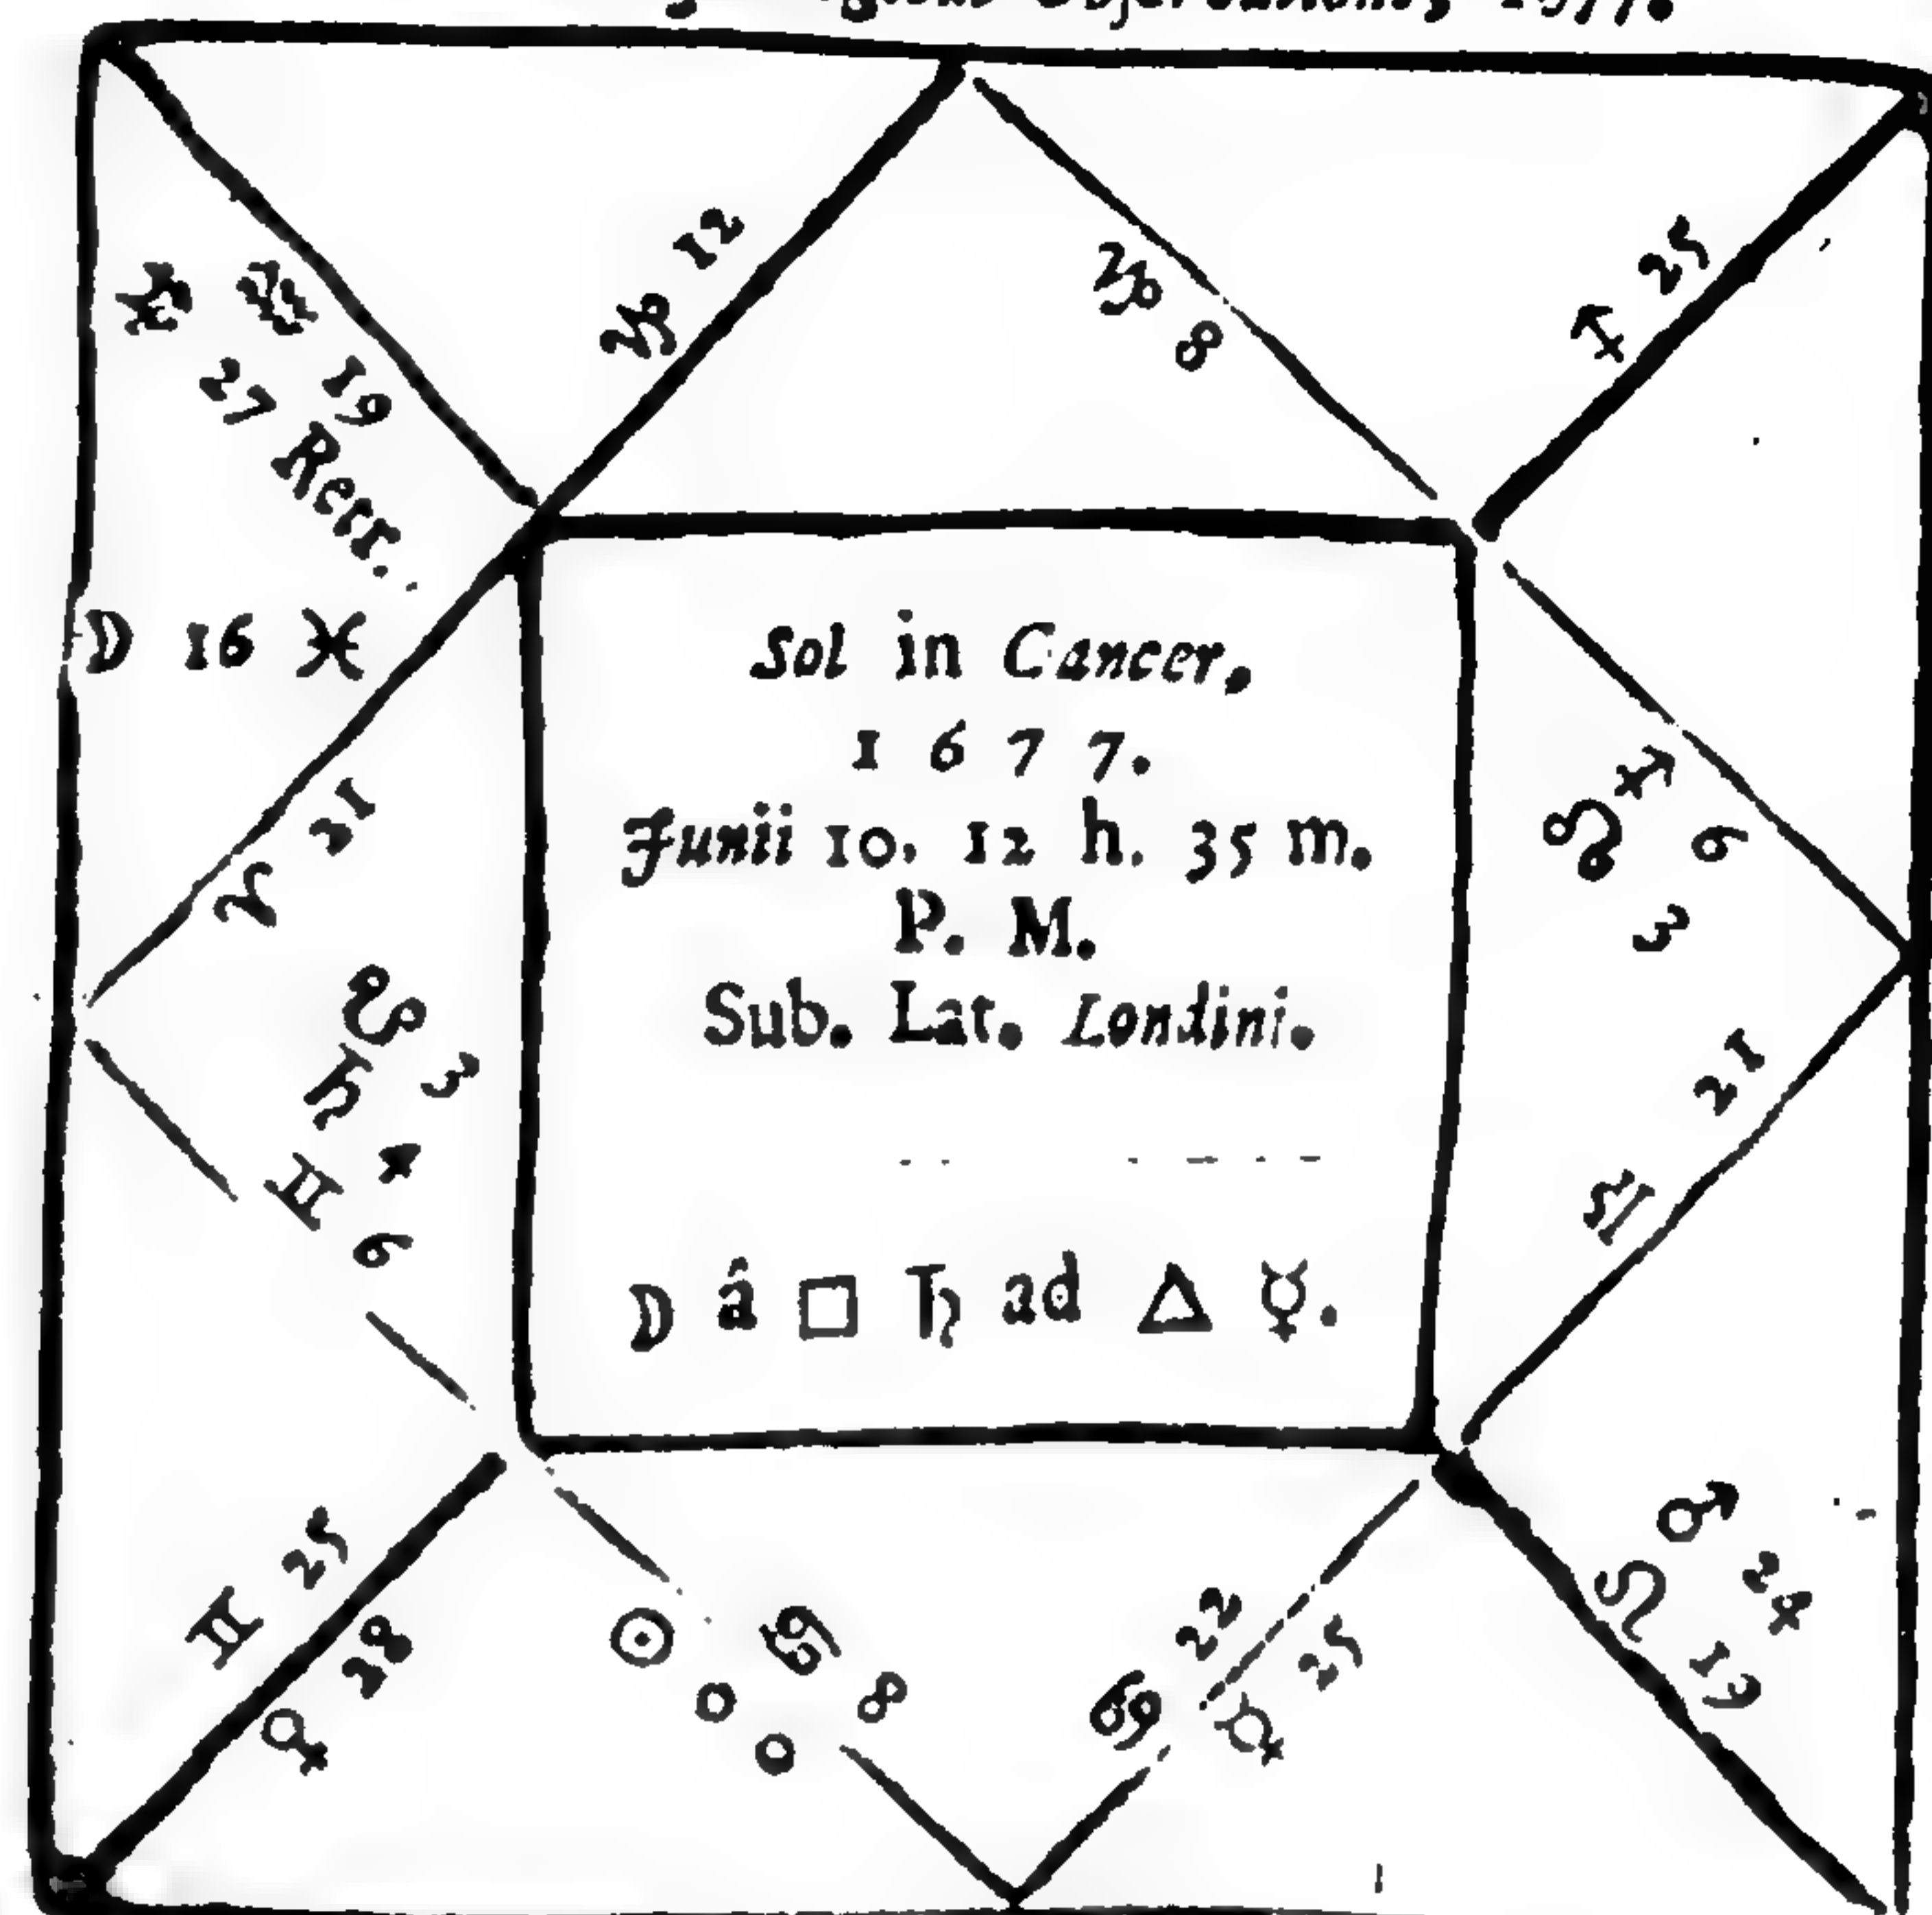

2. The Summer Season.

**T**He Summer, the next glorious Season to the Spring, begins where the Spring ends: and the *Sun* having now mounted his Apogæon Chair of Honour, is removed to his greatest distance from the Earth, and maketh the largest portion of Sun-shine, and least quantity of shadow; or which is all one, longest days and shortest nights to us on this side of the Æquator.

And I shall here present you with the Figure of Heaven when the *Sun* enters ♋, which is ever the beginning of Summer. I know many will be apt to wonder that I should attempt to do thus, when a fixed Sign ascends the Horoscope in the Spring, it being against the judgment of *Guido Bonatus, Haly, Leopoldus, &c.* so to do. But alas! the opinions of Authors are not to be opposed to experience. If I find 1675 as fixed in its actions, under a movable Horoscope, as 1674 under its fixed one, I shall not scruple to question the Doctrine of Astrologers in this point.

Shall we believe the *Sun* to be capable of making sensible differences in the Seasons of the year, at his entering of the Equinoctial and Solstitial points? and shall we not conclude him able to make differences also in the minds, manners and actions of men? 'tis purely arbitrary to allow of the one, and reject the other. I shall therefore, I say, dissent from that antick opinion of Astrologers.

In

In this Figure ♄ Lord of the Horoscope is in the sixth House, with a violent Star, in a violent Sign, and in ♋ of ♌ in the 12th. ♄ Lord of --- ♋ with ♀ in the 2d. near *Oculus Tauri*, another violent fixed Star. What! dost thou think that such positions are to be slighted, or passed by in silence? I say the Quarterly Ingresses are of more influence and signification than we are aware of. Shall the *Moons* Quarters be eminent in Meteorology, &c. and not the *Suns*? I hope to live to purge the chaff from the wheat in Astrology; or at least to see it done by some more learned hand. In the mean time let me tell thee, that this position signifies a *Sickly Summer*, and (I was about to say) a *Beggarly* one; with sundry Imprisonments and Deaths herein of many eminent Persons. I say no more to the Astrological part.

*Some Astrological Observations, 1677.*

This curious Season continues all the time that the *Sun* makes his progress through the three last Northern Signs, viz. ♄, ♀, ♃; and the grand rulers hereof (in this sense) are the ♃, ☉, and ♀. The ♃ here precedes the ☉ in Government, and all the Births of the foregoing Spring are now sweld to a pleasing Dropsie, and so they remain for the first month of the Summer; and then the *Sun* assumes a particular (as well as a general) power of governing; and by his great heat reduces all Vegetables from their Anasarchal swelling, to a positive Hectick Fever. Thereby ripening the seeds of Flowers, Herbs, and Fruits, &c. And this is the work of the second month of the Summer season. After this excellent office of the *Sun*s performing, ♄ enters upon the Regency of the last month of this Quarter, and *Virgo* being an earthly sign, he herein reduceth all things from their Hectick condition, into a direct Marasmus. And now all things are ripe for the Sytle, and for the honest Harvest-mans levelling hand: and the disease of this Quarter being become thus desperate, it is in vain to think to relieve its wasted spirits by Cordials, or to hope to retrieve its almost decay'd life, by applying Pigeons or Cupping-glasses.

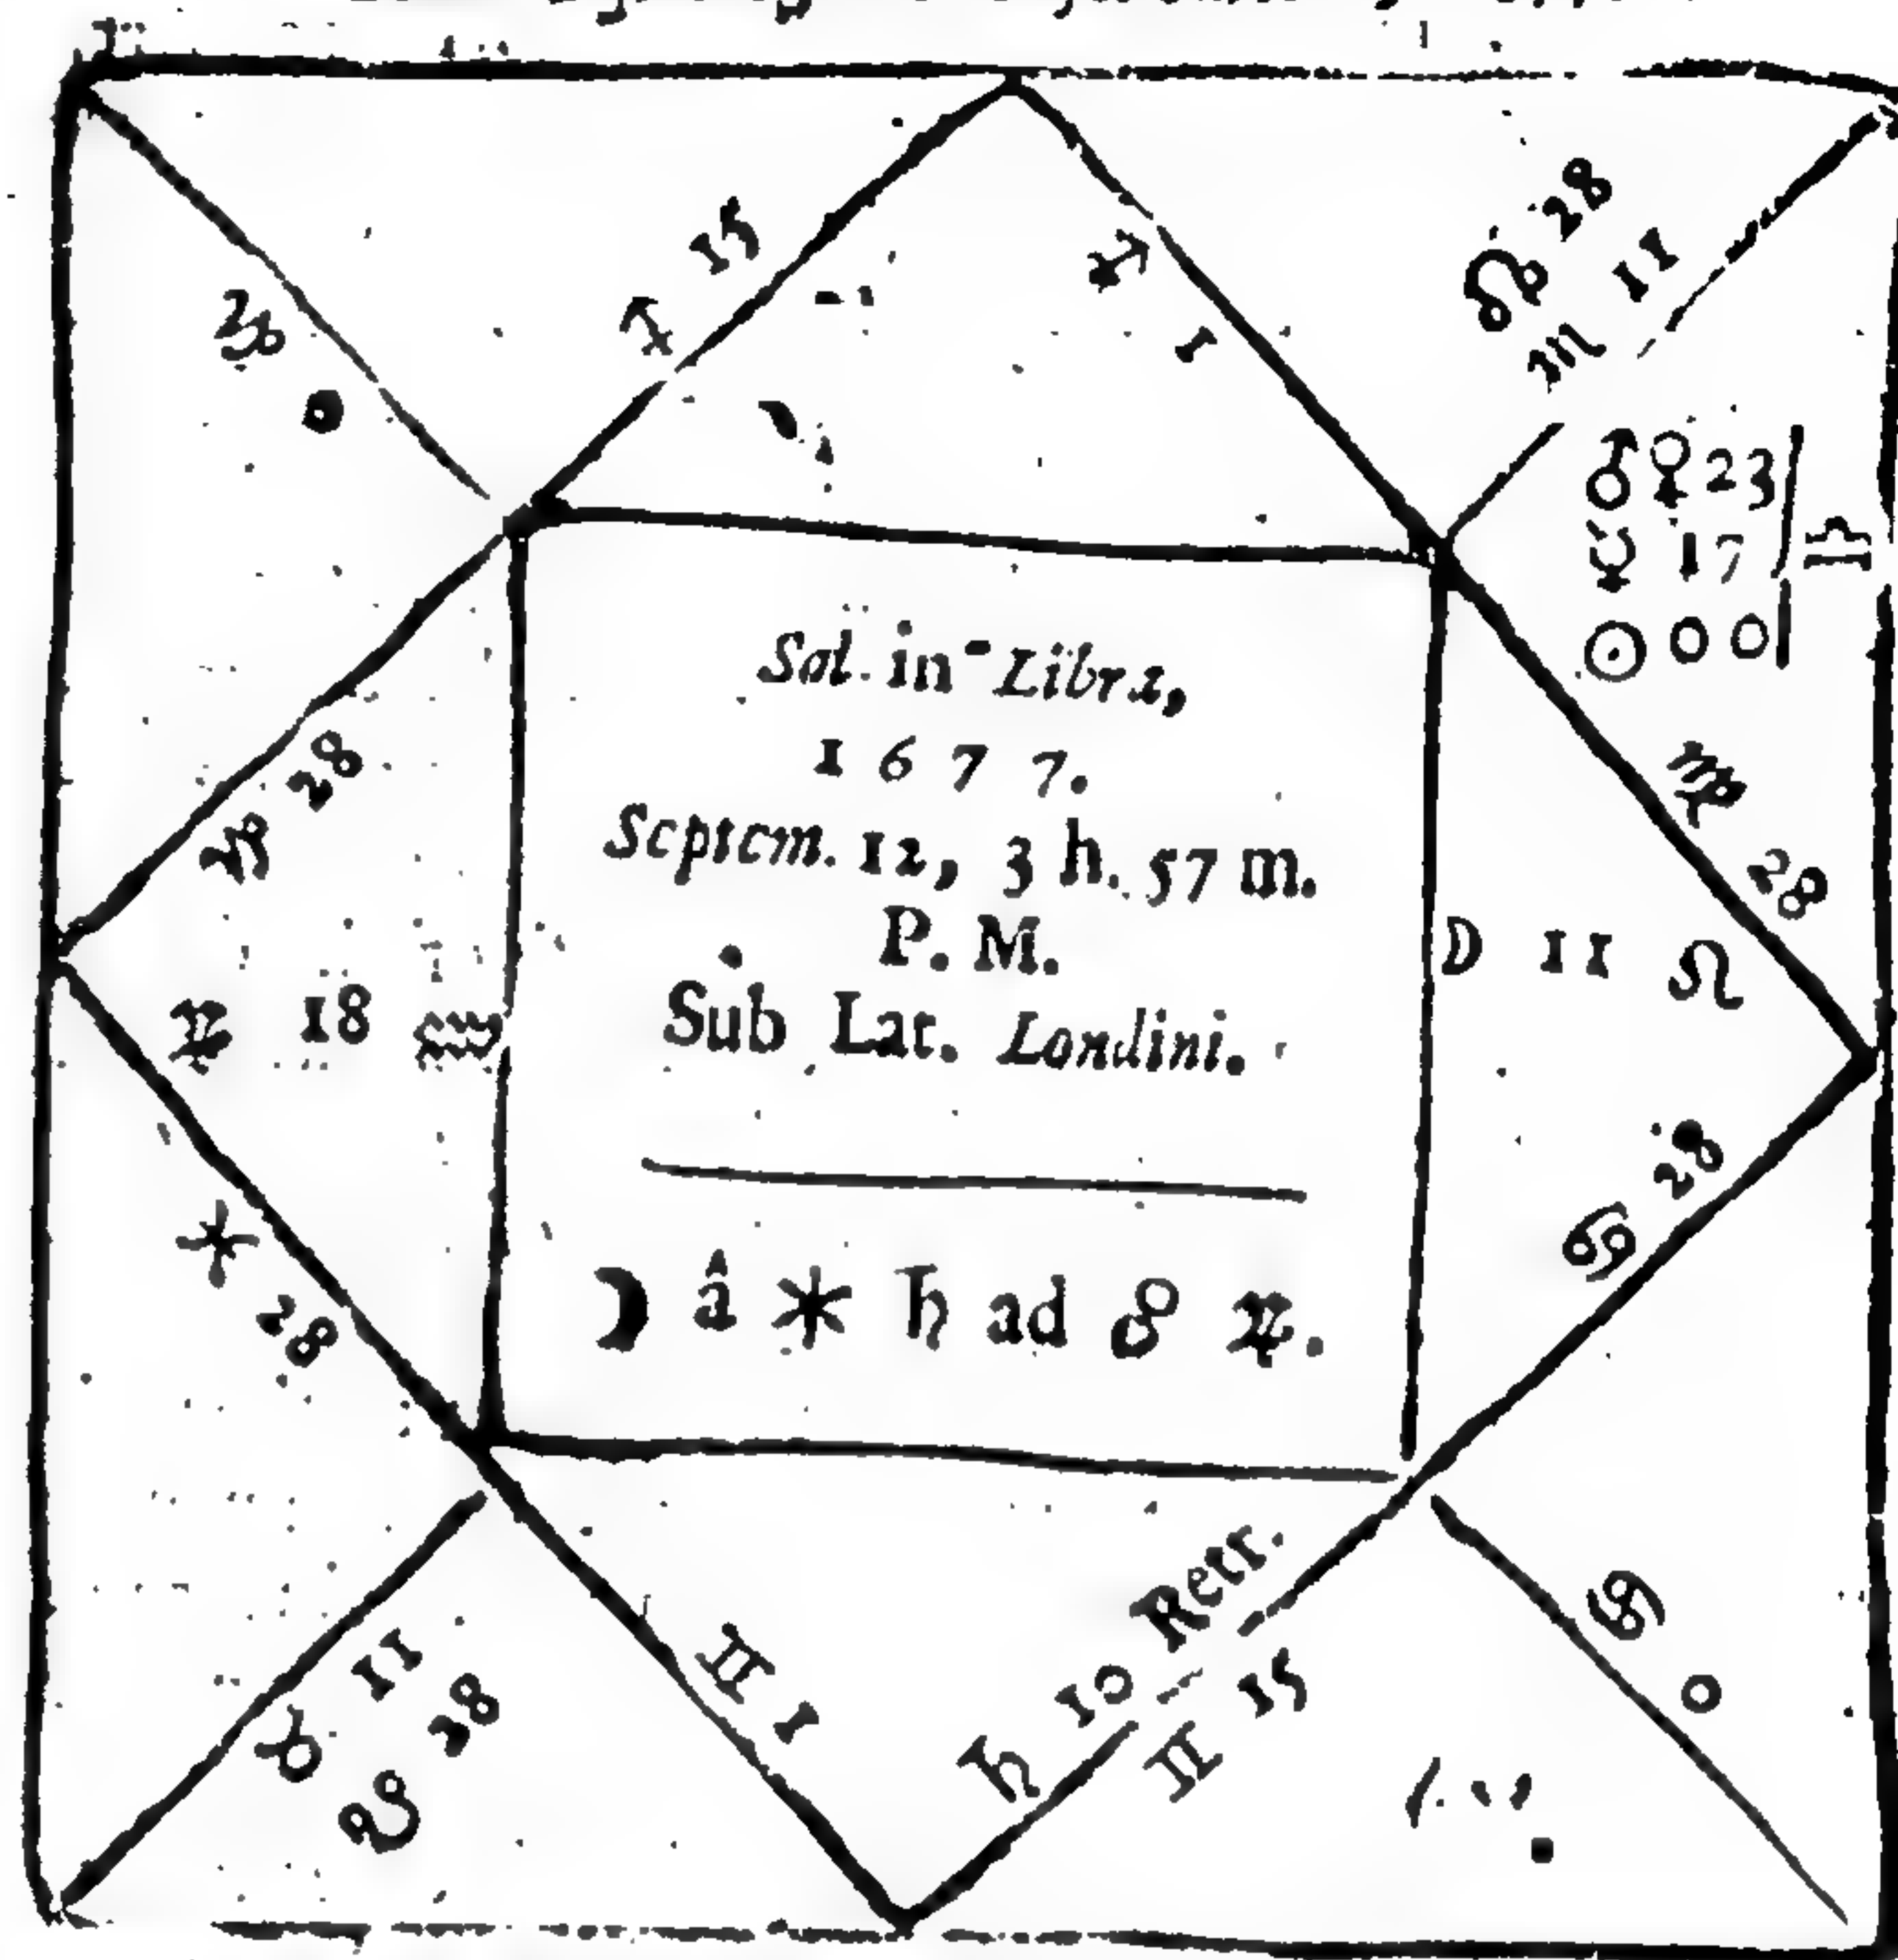

Do you not see how orderly the Seasons of the year are govern'd by the several Planets in their turns? and this according to their Natures and Qualities, as Astrologers have distinguished their Dignities.

And now we having seen the death of the Spring and Summer seasons, the only pleasant and delightful parts of the year, let us a little in the next place attend their Funerals (that being the last office of kindness one friend can perform for another), which will be by considering of

*3. The Autumnal Season.*

The Figures still seem to be of the same warp and woof:

*Some Astrological Observations, 1677.*

woof: in the Spring Figure the Luminaries were in ♄, in the Summer Scheme ♄ and ♃ were in ♄. In this Autumnal one, the ♃ is in ♄ ♃; there is also a Conspiracy in other parts of the Schemes. It is not improbable, but as all the Planets pay an observance to the *Sun* by their Motions, so they may in their Positions and Influences too. Else why such concurrent Figures? can we think they happen to be so by chance? or by a pre-ordination of the wise disposer of all things in Heaven, Earth and Sea? Many Astrologers, like many Fanatick Preachers, run before they are sent, and will needs be croaking like Frogs while they are yet half mud: they will pretend to be teaching of others, when as they have need to be taught the first Principles of the Science they pre-

pretend unto. Indeed Astrology is too glorious an Art, and too near of kin to Divinity, to be made sport withal.

It is observable, that the fiery Planet  $\delta$  rules the Horoscope in all three of the Figures: this last by Exaltation, and the other two by Domal dignity, which is the greatest allowed by Astrologers.

This Autumnal season begins where Summer concludes, and continueth all the time that the Sun is perambulating through the signs of *Libra*, *Scorpio*, *Sagittary*: and the Governours of them are *Venus* and *Jupiter*.

*Venus* bestows her tears upon the Hearse of the deceased Summer, and hereby generates a Phoenix out of the old ones ashes: and so for the first of these months we are made happy with a later Spring; but of no long continuance, but soon fading and abating.

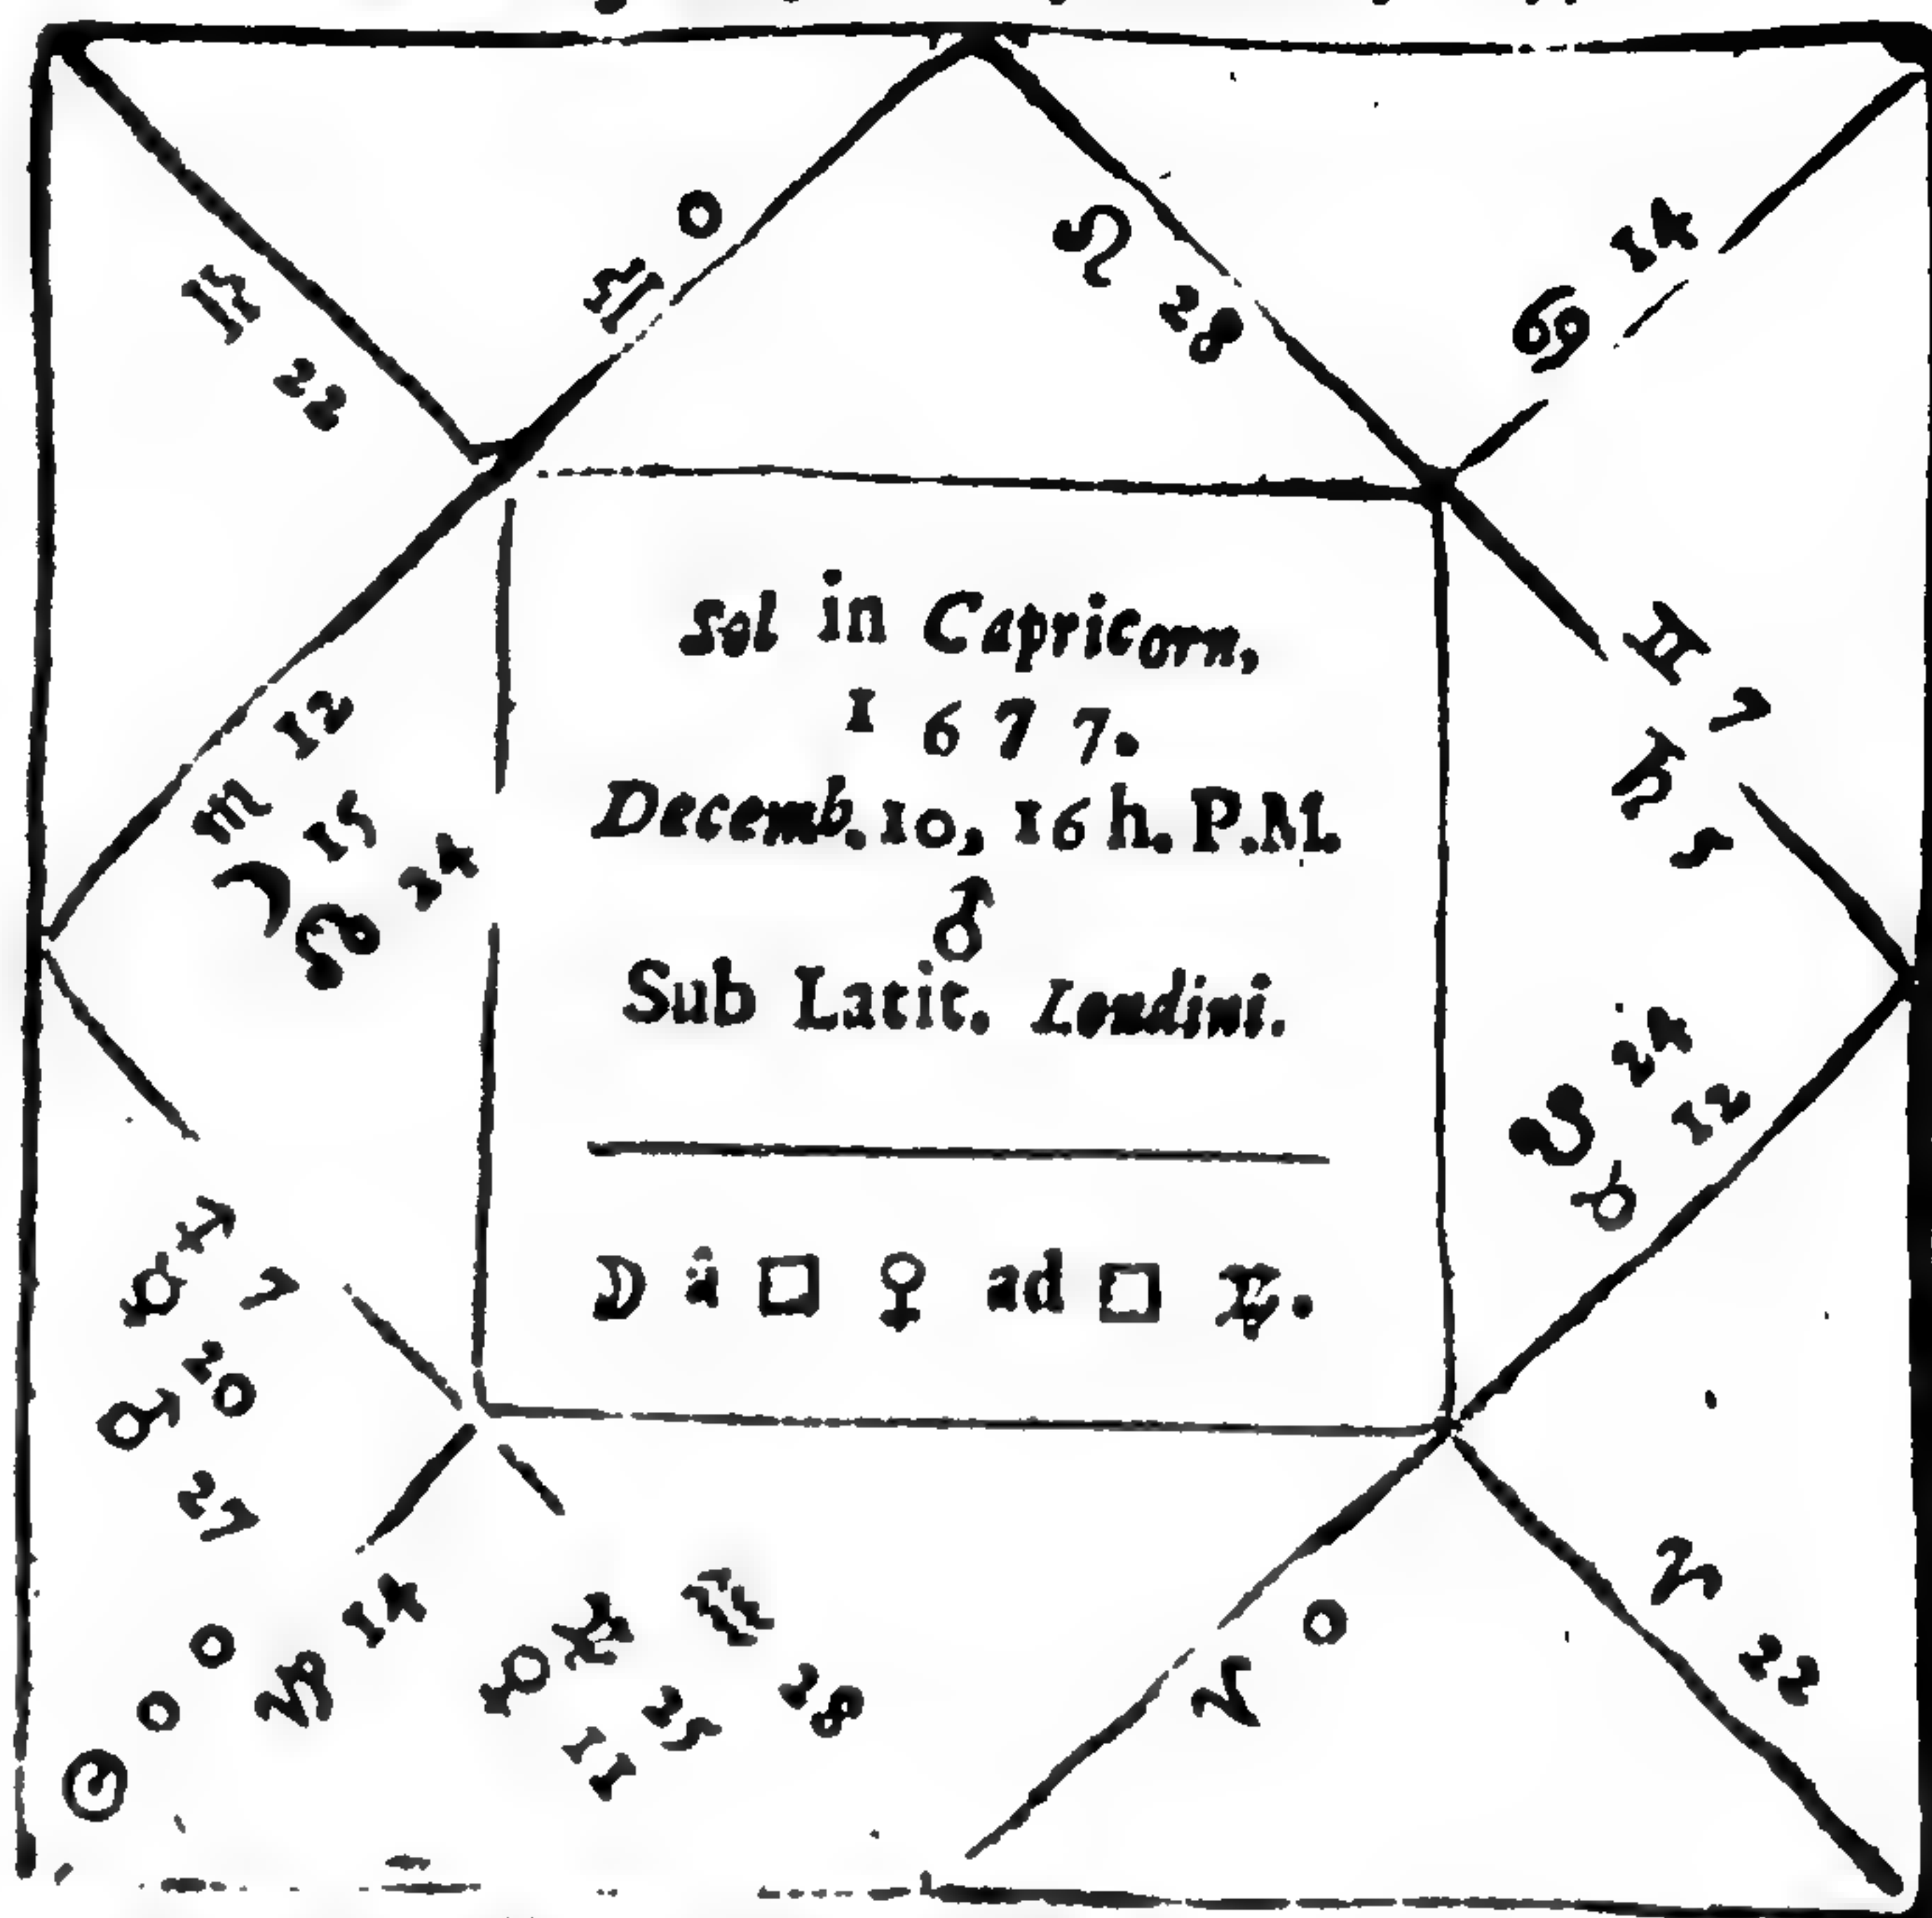

$\delta$  comes next, and endeavours to add heat to the moisture that  $\eta$  lent, the better to cherish the later Summer: but that too is soon returned by reason of the absence of the *Sun*, the fountain of all heat, and grand principle of generation.

But lastly comes  $\pi$ , and by his Balsamick beams endeavours to perfect what  $\delta$  and  $\eta$  could not alone; and so conserves the Mummial vertue of all Plants, Herbs, Fruits and Flowers, &c. for the good of Humane kind, and for the preservation of the Species of all things; at least to the end of this declining Quarter, which is as far as his government extends. And so he leaves us to consider of,

#### 4. The Brumal or Winter Quarter.

**I**N this Coelestial Figure  $\eta$  is in  $m$  in the Horoscope, and in Quadrate of  $\pi$ . The Lord of the Horoscope (which is  $\delta$ ) is in the second, in  $\eta$   $\eta$ . It is an industrious, but yet a malicious Figure: Many several unjust ways will be made use of for gain, under this Revolution: *per fas aut nefas*, any kind of art now to get mon-

neys,

neys, will be liberally made use of; and these practices will be as readily followed by the pious and the profane.  $\eta$ , Lady of the 9th. is in the Horoscope in *domo Martis*; and the  $\delta$  of  $\delta$ ,  $\eta$ , is in *domo Jovis*. The *Ananias's* of this age, as well as in *Ben. Johnson's* time, may think it lawful to cast Dollars, though not to coyn Crown-pieces; and if any of them come to suffer for it, they may take it for a warning, and learn for the future, not to be meddling with edg-tools.

Here methinks I meet an Objection against my Hypothesis, which is this, ---- If  $\delta$  rule all the Ingresses of the year, why then any more Figures than one? as ancient Astrologers teach? I answer, 1. Though  $\delta$  rule the Horoscope (more or less) of all the Figures of the four Seasons

*Some Astrological Observations, 1677.*

sons, he is not equally posited in them; and therefore not equally significant in them. Besides, 2. Though he govern the Horoscopes of all the Ingresses in this year, (which I must acknowledg renders it the more dangerous and violent, &c.) he may not be so affected for regency again, in 20 years together. It is therefore eminently necessary, (it is so far from being vain) to understand the Solar Ingresses distinctly, that thereby we may discover the better and more certainly, how the Macrocosm or greater world, is affected toward this little Globe of Earth on which we live. But leaving this Astrological discourse, we will come to consider the Physical Description of this Quarter.

The Brumal or Winter Quarter always begins where the Autumnal Season ends, i.e. when the Sun first settles the beginning of the Tropical sign of ♊; the Earth being then farthest deflected from the ☉'s perpendicular Rayes, receiveth least portion of Sun-shine, and greatest quantity of shadow, and so causeth shortest days and longest nights to us on this side the Equator. The ☉ is in his Perigeon, or nearest distance to the Earth, he being now opposite to his Apogee, which is *Cancer*.

This Melancholy Quarter continueth all that time which the Sun is transiting thorow ♊, ♋, and ♌. The Physical Rulers of this Quarter are the envious Planet ♄, and benificent Planet ♀: but ♄ hath a double power to that of ♀; because ♊ and ♋ are both his Signs and Mansion-houses. And hence it is, that all things (this Quarter) look with a sad and unpleasant face, and are seen to wear the Image of Death and Destruction. Now Frosts, Snows, Hail, black Clouds, Rain, Isicles, Barrenness, extremity of Cold, and of all things that are negative to delight and pleasure, have their Regency.

And thus you see how all the Seasons are made, and how by contending and struggling Interests they are maintain'd,

*Some Astrological Observations, 1677.*

rain'd; how orderly they take the government one from another; and also how at the last that ♄ is the devourer of his own issue; and how ♀ by his gentler moisture in ♋, puts us in hopes of an approaching Spring.

And thus by this orderly government of the Planets through the several Seasons of the year, are we put in mind of the passage of the several parts of our life, hereunto agreeable; viz. How we pass the Spring of our Infancy and Adolescence; the Summer of our Manhood and strength; the Autumn of our declining years; and the Winter of our age; where ♄ stands ready with his Sythe to cut us down: And how by passing this vale of misery, this natural death, we go onward to the government of ♀ to Immortality, and to a blessed life, where we shall behold GOD Almighty in Glory. But—

*Quis vos, O Deus, aut quis vestra palatia pandet  
Tres me! &c.*

Oh! who shall tell, who shall describe thy Throne,  
Thou great THREE-ONE!

There thou thy self dost in full presence show;  
Not absent from these meaner Worlds below:  
No, if thou wert, the Elements league would cease,  
And all thy Creatures break thy Natures peace:  
The Sun would stop his course, or gallop back,  
The Stars drop out, the Poles themselves would crack.  
Earth's strong Foundations would be torn in twain,  
And this vast work all ravel out again  
To its first Nothing.

*Cowley in Dav.*

*Of the Luminarian Eclipses, 1677.*

**F**our times will the Inhabitants of this Earthly Globe whereon we live, have the Luminaries Eclipsed from their sight: Twice the Sun, and as oft the Moon.

The first will be an Eclipse of the Moon, on May the 6, at 15 h. P. M. in 27 degr. of ♍, opposite to the *Plaiades*, a tempestuous and turbulent constellation; ♄ rules the defect. It will be but little visible unto us, though a great Eclipse in it self. And the Sun riseth before the Eclipse be ended, therefore we cannot see it all.

The second Eclipse will be of the Sun, on May 21, about  
ten

*Some Astrological Observations, 1677.*

ten of the clock in the morning, in ten degrees of  $\Pi$ , but by reason of the *Moons* Parallax, and great South Latitude, it will scarcely be seen of us in these Northern parts of the World. It will appear a very great Eclipse in the Islands of *St. Martin, Hellen, Mary, &c.* and in the *Zemurian Lake, &c.*

The third will be an Eclipse of the *Moon*, on *Octob. 30*, about 11 of the clock before noon, in 16 degrees of *Taurus*; but as to us invisible; it will be seen of our *Antipodes*, it happening near their Meridian.

The last will be a *Solar Eclipse* on *Novemb. 14*, near our Midnight, and therefore not to be seen in any of these Northern parts of the world. It is celebrated in the beginning of *Sagittary*, near the Regal Star call'd *Cor Scorpionis*, or the *Scorpions Heart*.

*Of the famous opposition of Saturn and Mars on November the 13th. 1677.*

ON *Novemb. 13*, about Midnight this year, there happens a famous Opposition of  $\text{h}$  and  $\text{g}$ , in  $7^{\circ} 13'$  of  $\Pi$  and  $\text{z}$ , viz. near unto those grand Constellations, the *Bulls eye*, and *Scorpions Heart*; there was a like Opposition of these two Planets on *Octob. the 21, 1647*, upon which the learned *Captain George Wharton* wrote in his *Bellum Hibemicale*; as may be seen by any that shall have recourse to that Treatise.

There was *Anno 1646*, on *June 12*, a  $\text{g}$  of  $\text{h}$  and  $\text{g}$  in 14 degrees of *Taurus*; of which the same worthy Author wrote in the aforesaid Book, against the temporising Scriblings of *J. B.* and *W. L.* the pretended Oracles of those times, or real Incendiaries rather. And we have lately passed another Conjunction of the same Planets, viz. on *July 15, 1676*, in 25 degr. of  $\text{g}$  *serè*. And I know what Astrologers say unto such Conjunctions, but their significations are not so pleasant as that I should hope to delight my Reader with the publishing of them, & therefore I will pretermitt them. And if the Conjunction of these two Planets be bad, their Opposition is worse, if we may believe *Haly*; who saith, *Quod g h & g, est deterior eorum Conjunctione, & deteriores, ac maligniores significaciones demonstrant: de jud. Astr. p. 8. cap. 6.* The Opposition of  $\text{h}$  and  $\text{g}$  is worse than the Conjunction of them, and demonstrates more dangerous and malignant effects. *Hæc oppositio significat quod homines in se invicem discordabunt, & proficientur se mutuo odio; & cessabunt se familiariter invisere, & detrahit quilibet alteri, &c. Haly.* This Opposition of  $\text{h}$  and  $\text{g}$  denotes that men shall contend and quarrel with one another, and shall pursue each other with mutual hatred; that they shall forbear former friendships and familiarities, and in the room thereof shall be apt to backbite and calumniate one another. It further denotes a mortality of elderly persons; many Thefts and Robberies, much deceitful dealing in the world; and that men will be generally inclined to treachery, &c. many severe Taxes, &c. in those Countries subject to the signs wherein the Opposition is celebrated.

*Some Astrological Observations, 1677.*

*nificaciones demonstrant: de jud. Astr. p. 8. cap. 6.* The Opposition of  $\text{h}$  and  $\text{g}$  is worse than the Conjunction of them, and demonstrates more dangerous and malignant effects.

*Hæc oppositio significat quod homines in se invicem discordabunt, & proficientur se mutuo odio; & cessabunt se familiariter invisere, & detrahit quilibet alteri, &c. Haly.* This Opposition of  $\text{h}$  and  $\text{g}$  denotes that men shall contend and quarrel with one another, and shall pursue each other with mutual hatred; that they shall forbear former friendships and familiarities, and in the room thereof shall be apt to backbite and calumniate one another. It further denotes a mortality of elderly persons; many Thefts and Robberies, much deceitful dealing in the world; and that men will be generally inclined to treachery, &c. many severe Taxes, &c. in those Countries subject to the signs wherein the Opposition is celebrated.

I have read in the Aphoristical Authors of Astrology, that the Conjunctions of the Two Infortunes makes a Fortune, but by what Rhetorical Figure any one can make it good, I confess I am yet to learn: yet such hath bin my folly formerly, as to give faith to such impossibilities.

To form Light out of Darkness is not Philosophy, but Miracle; and none but God Almighty, by his Eternal Fiat, can effect it. If Fire be added to Fire, the heat must be the more encreased: If Frost to Frost, the Cold is the more augmented. And the variety of *Jobs* sufferings, made *Jobs* sorrows the more insupportable. But many Astrologers (as that excellent man *Sir Tho. Brown* said of *Cardan*) are too greedy of Truth; and often in the room hereof not only embrace, but earnestly defend notorious errors. If as the learned *Childrey* urged, Astrology were refined, it might be defended. "That there is such a Science as Astrology (saith he) there is no question to be made. The Stars have an influence on us, and some small matter touching this Influence Astrology knows; yet no more—than to assure her that she doth know something of it. But her vanity is, she promiseth (or rather her idle Students) much more than she is able to perform: and is led much more by fancy and plausibilities

Some Astrological Observations, 1677.

"ities, than sound reason. I could wish that to *Multa pra-*  
*"dicuntur, quae non eveniunt: multa eveniunt, quae non predi-*  
*"cuntur*, she had some other answer than *Pudet haec oppro-*  
*"bria nobis, &c.* And to let her know I wish it heartily, I  
 shall make it part of my endeavour to furnish her with  
 an answer. There is much to be found out if men did  
 but well attend to observation, and doubt even the very  
 Principles of Astrology, till they had examin'd the truth  
 of them. For the most important, maxims in the art  
 are many of them shrewdly to be suspected, though there  
 may be peradventure an instance or two alledged to  
 their advantage, wherein they have hit passing well; be-  
 cause in Astrology (above most, if not all other pieces of  
 learning,) it is very easie to mistake a non-cause for a  
 true-cause; and a *Me ambulanti coruscavit*, for a *Sol oritur*,  
*"ergo dies est*. The way to go forward in this excellent  
 Treatise, is to look back, and compare the accidents of  
 Men and States, with the Influences of Heaven; and this  
 will not only try the truth of the old Principles, but  
 add new ones: such (it is very likely) as the Sons of  
 Art do not yet dream of. *Epist. to Britannia Baconica*,  
 Printed by H. Everſdon, 1661.

I also with this learned Divine, assert a truth in Astrology; but yet must needs confess, (with the learned Dr. Goad in his Astrological Account of 1660, p. 14), that there are many things therein received for Principles too mysterious for my apprehension, unless some charitable Demonstration from sense and experience make them appear to be so. And it is by reason of the Apocryphal part of Astrology, that the sound part so extremely suffers. I have as much to say against many received rules in Astrology, as *Hemina* had against  $\odot$  in  $\times$  and  $\gamma$ , for stolidity; and that with much more truth and justice. I cannot assent to those that (pretending to Astrology) confidently term *Virgo*, barbarous; or *Scorpio*, wicked; or that *Mercury* joined to *Mars*, makes the man's name *Matthew*. Neither can I chuse but disown and protest against those *Scioll*, that pretend to discover and cure witchcraft by Astrology; or that call Hair, Tiles, Thatch, Horse-shoes, &c. Natural reme-

Some Astrological Observations, 1677:

remedies against it. Since Astrology is bounded by Natural Philosophy, & medleth not with things preternatural, as Witchcraft must needs be. Nor can I account it less than the highest Blasphemy, for any to pretend that Astrology teacheth us to attain to Prophecy; it being against the very first Aphorism of *Ptolomy's Centiloquium*, and against all Reason Divine and Humane. Prophecy we know is *Donum Dei*, the immediate gift of God, and not attainable by any art of man's devising. But *Cynthia aurem vellit, &c.* I conclude my Discourse of these matter, and of this year together.

Some short Rules directing how this Ephemeris may be reduced to JAMAICA, &c

I Have in some former years wrote an Ephemeris particularly for *Jamaica*, &c. but finding it far more easie to reduce my *British* Ephemeris thither, I thought fit herein to teach how the same may be done. The Days of the Month and Week are the same in *Jamaica* as in *England*, with respect had to Longitudinary difference, which is near 6 hours in time: i.e. They in the *Indies* are just rising, when we in *England* are at high-dinner; and we are preparing for our Bed, when they are at their Noon-tide meals; and they are devoting themselves to their nightly repose, when we are become vassals to *Morpheus*, and fast chained to our midnight sleep. So that we differ from each other, not in the day, but in a part thereof only. And as to the difference of the Planets motions between *England* and *Jamaica*, it is but adding to the *Sun's* place 15 min. as you find him in this Ephemeris; and to the *Moons* place 3 degr. or thereabouts, in common figures, and it will be exact enough. And in the Planets Aspects, and in the *New* and *Full Moons*, together with their waxing and waning Quarters, it is but subtracting 6 hours from the time mention'd in our Ephemeris, and so you have the Motions, Lunations, and Aspect of the *Sun*, *Moon*, and Planets each day in *Jamaica* as exactly as in *England*. In a thing so easie, examples are needless. Those that would be satisfied more particularly of *Jamaica*, may have recourse unto the Nativity thereof, by me calculated (and Printed Anno 1673), for 180 years to come, commencing on May 10, 1655, viz. when it was taken by the *English* under the command of Gen. *Penablos*; as also unto my Almanacks of 1674, & 1675, made particularly for that fruitful Country; wherein they may find all objections

jections which lazy ignorant people make against the temperature of that worthy Country, fully answer'd; and the growing greatness of that place, as to Riches, Honor, Power, Law, Religion, &c. fairly demonstrated from Cœlestial motions & influences.

God preserve his Majesty of Great Britain, and send him long life, and a happy Reign over us; and enlarge his Dominions in all parts of the world: and let his Subjects, & all such as faithfully & honestly pay homage to his bright and awful Scepter, be ever happy in their Persons, Families & Fortunes. Let the Stars of Heaven dart gentle and preserving Influences upon England, and upon all the English in the West-Indies. Let the Law flourish, and Religion increase, let Truth and true Science ever shine among us, to Gods glory, the Churches honour, and Splendor, and to the good and comfort of us all. This is the Cordial, Fervent, and assiduous Prayer of

Brick-Court, by the Deans-yard, Westminster.

JOHN GADBURY

# A D V E R T I S E M E N T S.

**H**AVING received sundry Letters from divers learned and ingenious Persons, as well from beyond the Seas, as from several parts of England, requesting a publication of my BODY of ASTROLOGY, which I have so often promised to the world: these are to satisfy all such that have an expectation of the said Book, that I am seriously mindful of that my Engagement, and resolve with all convenient speed to compleat the same; and hope in a short time to meet an opportunity of influence auspicious, under which to publish it, for the service of the sober Sons of Art, and the real advancement of the Truths of Astrology.

The Curiosities of Scurvy-grass: being an excellent Treatise of the Nature of that Herb, and of great advantage to English-men, who (as all Nations) are mostly subject to be afflicted with the Scurvy. Englished by Dr. Tho. Sherley, Physician in Ordinary to the Kings most Excellent Majesty, and sold by William Cademan in the New-Exchange.

De Succo Pancreatico: Or an excellent Physical and Anatomical Discourse of the Nature and Office of the Pancreatique Juice; the knowledg whereof is of great use to Physicians. Englished by Christopher Pack, Med. Lon. &c. Sold by Maj. N. Brooks at the Angel in Cornhill.

At the Globe and Furnaces in the Postern by Moorgate, is prepared all sorts of Chymical Medicines very faithfully, for the advantage of Physicians, Apothecaries, Chyrurgeons, &c. and at moderate Rates: By the aforesaid Christopher Pack.
